Acknowledgement of Assistance

All manuscripts utilizing data made available through the Zentralarchiv fuer empirische Sozialforschung should acknowledge that fact as well as identify the original collectors of the data. We kindly ask all users to follow some adaptation of the following statement:

The data utilized in this (publication) were documented and made available by the ZENTRALARCHIV FUER EMPIRISCHE SOZIALFORSCHUNG, KOELN. The data for the 'ISSP' were collected by independent institutions in each country (see: principal investigators in the study-description-schemes for each participating country). Neither the original collectors nor the ZENTRALARCHIV bear any responsibility for the analyses or interpretation presented here

In order to provide funding agencies with essential information about the use of archival resources, and to facilitate the exchange of information about research activities based on the ZENTRALARCHIV's holdings, each user is expected to send two copies of each completed manuscript to the ZENTRALARCHIV.

Please note

All marginals in this documentation are calculated from

unweighted data

Please consider also that - especially in the section of the background variables - the same code-values do not always have the same meaning for each country. The differences are documented in this codebook.

An Introduction to the ISSP

The International Social Survey Programme

The ISSP is a continuing annual programme of cross-national collaboration on surveys covering topics important for social science research. It brings together pre-existing social science projects and coordinates research goals, thereby adding a cross-national, cross-cultural perspective to the individual national studies. Twenty-six countries are members of the ISSP.

It started late in 1983 when SCPR, London, secured funds from the Nuffield Foundation to hold meetings to further international collaboration between four existing surveys - the General Social Survey, conducted by NORC in the USA, the British Social Attitudes Survey, conducted by SCPR in Great Britain, the Allgemeine Bevölkerungsumfrage der Sozialwissenschaften, conducted by ZUMA in West Germany and the National Social Science Survey, conducted by ANU in Australia. Prior to this, NORC and ZUMA had been collaborating bilaterally since 1982 on a common set of questions.

The four founding members agreed to (1) jointly develop modules dealing with important areas of social science, (2) field the modules as a fifteen-minute supplement to the regular national surveys (or a special survey if necessary), (3) include an extensive common core of background variables and (4) make the data available to the social science community as soon as possible.

Each research organisation funds all of its own costs. There are no central funds. The merging of the data into a cross-national data set is performed by the Zentralarchiv für Empirische Sozialforschung, University of Cologne.

Since 1984, the ISSP has grown to 26 nations: the founding four - Australia, Germany, Great Britain and the United States - plus Austria, Bulgaria, Canada, Cyprus, the Czech Republic, France, Hungary, Israel, Ireland, Italy, Japan, the Netherlands, New Zealand, Norway, the Philippines, Poland, Portugal, Russia, the Slovakian Republic, Slovenia, Spain and Sweden.

The annual topics for the ISSP are developed over several years by a sub-committee and are pre-tested in various countries. The annual plenary meeting of the ISSP then adopts the final questionnaire. ISSP questions need to relevant to all countries and expressed in an equivalent manner in all languages. The questionnaire is originally drafted in British English and then translated into other languages.

The ISSP marks several new departures in the area of cross-national research. First, the collaboration between organisations is not ad hoc or intermittent, but routine and continual. Second, while necessarily more circumscribed than collaboration dedicated solely to cross-national research on a single topic, the ISSP makes cross-national research a basic part of the national research agenda of each participating country. Third, by combining a cross-time with a cross-national perspective, two powerful research designs are being used to study societal processes.

Study description: Australia

Study title: International Social Science Surveys / Australia (ISSS/A) 1993-1994

Fieldwork dates: December 1993 to October 1994

Principal investigators:

Jonathan Kelley, Clive Bean, Mariah Evans

Sample type: Panel of respondents from the ISSS/A 1993 'Inequality II' survey, which

was in turn a panel on the earlier National Social Science Survey 'Family' and 'Lifestyles' surveys, conducted in late 1989 and early 1990 (from which the socio-demographic background variables for the 1993-94 data are taken). The sample for the 1989-90 surveys was a nationwide simple random sample drawn from the (compulsory) Australian electoral rolls by the Australian Electoral Commission. Potential respondents were eligible for inclusion in the 1993-94 survey if they had completed the 1993 survey, had not indicated that they did not wish to participate further and were still contactable at the same

address.

Fieldwork institute: ISSS/A, Research School of Social Sciences, Australian National

University, in cojunction with Datacol. We acknowledge the financial support of the Australian Institute of Family Studies as well as the Research School of Social Sciences, Australian National University.

Fieldwork iethods: Self-completion questionnaire mailed out to respondents and returned by

reply-paid mail. Potential non-respondents were pursued by up to five

follow-up mailings.

Context of ISSP questionnaire:

Questionnaire containing ISSP 'Environment' and 'Family II' modules.

Sample size: 1779

Response rates: 2318 A - Total issued

416 B - Ineligible / out of scope

1902 C - Total eligible (in scope sample)

1779 D - Total completed ISSP questionnaires received

101 F - Refusals

22 H - Other (valid questionnaire without information necessary to link panel respondents to background data from previous wave of the survey)

Weighted: Yes

Weighting procedure: Weighting corrects the compound of the 'Austrian Social Survey

1993/1994' to the most recent Austrian Mikrocensus data. The weighted ISSP93/94 dataset gives slightly different marginals from the weighted

overall dataset.

Study description: Bulgaria

Study title: Women, Work and the Family 1994

Fieldwork dates: March 7, 1995 - March 31, 1995

Principal investigators:

Lilia Dimova, Agency for Social Analyses, Sofia

Sample type:

The sampling model used is that of a two-stage cluster sample. It is representative for the population of Bulgaria aged 18 years and over. At the first stage 105 clusters (which represent the smallest organizational units of the latest population census - December 1992) were selected at random with probability proportional to their size (the number of households in each cluster). At the second stage territorial areas (streets and apartment houses) within each cluster were selected at random; 12 addresses were sequentially visited. In each household 1 respondent was interviewed; respondents were selected employing a modified Kish scheme.

The sample is stratified by type of community. No replacements of temporary absent or refusing to participate respondents were allowed

Fieldwork methods:

The method employed is face-to-face interview. Fieldwork was conducted by the field-force of the Agency for Social Analyses, Sofia. All interviewers employed have undergone the necessary training and have considerable fieldwork experience.

Sample size: 1126

Response rates:

1327	Total questionnaires issued

95	95 Respondents that were found but not interviewed:					
	52 refusal to be interviewed					
	23 temporary absence					
	16 difficult contact (sick, too old, etc.)					
	4	dead				
4 Cancelled questionnaires						

Language: Bulgarian

Weighted: Yes

Weighting procedure: There are no indications for systematic bias in survey data. However, comparisons with general population data revealed the necessity of weighting. The weighting-factor is calculated using data from the 2% sample of the Census of December 1992 and is based on age, sex, education and type of community. Comparisons between population data, net survey sample and weighted sample show that only minor deviations "remain" in survey data after the weighting procedure.

Study description: Canada

Study title: 1994 Women in Society

Fieldwork dates: Feb. 15, 1993 - Mar. 15, 1994

Principal investigators:

Carleton University Survey Centre

Sample type: Stratified Multi-stage Random Sample

Fieldwork methods: Self-completion with drop-off and collection

Sampling method: A stratified multi-stage sampling method was employed using as the

primary strata for the five main regions: Atlantic Canada, Quebec, Ontario, Western Canada and British Columbia. Within these regions major sub-areas were randomly selected from Federal Electoral

Districts.

Eastern Canada: St. Johns, Newfoundland, St. John, New Brunswick,

Halifax, Nova Scotia, Charlottetown, Prince Edward

Island

Quebec: Quebec East, Hull/Aylmer, St. Honore/Westmount Ontario: Ottawa East, Mississauga North, Kingston and the

Islands

Western Canada: St. Boniface, Manitoba, Regina East, Saskatchewan,

Calgary West, Alberta

British Columbia: Fraser Valley East, North Vancouver/Burnaby,

Vancouver Centre

Within each of these districts two Enumeration Areas were randomly selected. Using Census maps the first two streets that began with the letter F and S and contained more than 50 residential units were then chosen resulting in a total of 64 sampling frames. Interviewers were instructed to divide the number of residences on any given street by the number of sample points required. In-home sampling used the "first birthday" technique.

Language: French / English

Weighted: Yes

Weighting procedure:

The Canadian data is weighted for both precision and stratification. In the case of the former data, is routinely weighted for age and sex. In the case of stratification the weighting applies to province. Since the Provinces' populations vary enormously the sampling method is a stratified random sample, stratified by region. This is done to ensure representation from the smallest regions, such as the Atlantic - Newfoundland, Nova Scotica, PEI, Bew Brunswick - wich accounts for only 12% of the Canadian population. Weighting for province restores the true population distribution. This would be unnecessary if provincial variance was marginal, but for almost all social and political indicators in Canada, province or region are critical measures. Due to stratification by province, the data are weighted for age, sex and province using 1991 Statistics Canada census parameters.

Study description: Great Britain

Study title: British Social Attitudes 1994 Survey

Fieldwork dates: May to July 1994

Principal investigators:

Roger Jowell, Lindsay Brook, Alison Park and Daphne Ahrendt

Sample type:

Stratified random probability. The sample is designed to be representative of adults aged 18 or over living in private accomodation in Great Britain. It was drawn from the Postcode Address File (PAF) which is a list of addresses compiled by the Post Office. The sampling method involved a multi-stage design: first a number of postcode sectors were selected with probabilty proportionate to the number of addresses in each sector. A number of addresses were then selected in each sector by starting from a random point on the list of addresses for each sector and choosing each address at a fixed interval. Finally when interviewers called at the addresses, they selected one dwelling unit and one respondent at the selected dwelling unit using a Kish grid.

Fieldwork methods:

Self-completion supplement given to respondents after the face-to-face interview. The supplement was either collected by the interviewer or posted back to the office.

Context of ISSP questionnaire:

SCPR's British Social Attitudes 1994 - version C of the self-completion questionnaire (i.e. 1/3 of total sample).

Sample size: Achieved on ISSP: 993

Resonse Rates:

2000	A - Total issued - total sample	
217	B - Not eligible	
1783	C - Total eligible (in scope sample)	
993	D - Total ISSP questionnaires

469	F - Refusals (main)	
176	(self completion)	
79	G - Non-contact	
66	H - Other	

Language: English

Weighted: Yes

Weighting procedure: Data were weighted to take account of the fact that not all units covered

in the survey had the same probability of selection. The weighting applied reflected the relative selection probabilities of the individual at the three main stages of selection: address, household and individual.

The average weight supplied was 1.9.

Study description: Hungary

Study title: Family and Changing Sex Roles

Fieldwork dates: May 30 to June 8, 1994

Principal investigators:

Tamas Kolosi, TARKI, Budapest

Sample type:

The sample was a "fresh" one, drawn from the post-election study including 1500 respondents. Sample drawing was different compared to TARKI's earlier method because files at the Population Register Bureau, we used formerly, were not available anymore as a consequence of the new Law by the Constitutional Court on Personal Rights. Still, sample drawing was a random procedure and samples were selected in three stages based on files from Hungarian Central Statistical Office. First, a cluster of settlements were selected and second households within the cities and villages. There was no possibility to select individuals, Central Statistical Office could provide only "addresses of households". Thus interviewers have received "addresses without names" and the third stage of sample drawing was to select the respondent within the household. This was done by the interviewer with help of Leslie Kish key after the number of people as well as the number of men was clarified in the selected household.

The Central Statistical Office provided substitute "addresses" that were used instead of those that could not be achieved. Thus the final number of achieved interviews remained 1500.

Still it is known that 463 of 1500 (30.8%) interviews from the original sample has failed and was substituted.

Fieldwork methods: Personal interviews by trained interviewers.

Context of ISSP questionnaire:

The ISSP94 Module was fielded as part of TARKI's post-election survey. Thus, the fieldwork was scheduled immediately after the elections. The questionnaire was designed in a way that the ISSP questions were placed in the beginning of the interview. Optional questions were not included. The ISSP questions were followed by questions on participation on the elections and voting for the parties. Questions on the respondent and background information were at the end of the questionnaire.

Sample size: 1500

Response rates:

166	F - Refusals
119	G - Non-contact
61	H - Other
24	R was unable to answer
93	Address did not exist

Language: Hungarian

Weighted: Yes

Weighting procedure:

The sample was statistically compared to the Census and Chi-Square tests were failed indicating that the sample need corrections.

In order to correct the sampling error we computed a weighting variable taking into account the type of residence, sex, age and highest educational level. The weight of each cases was computed as WEIGHT=(n/n')*(N'/N), where N=153553 (respondent above the age of 18 in the 2% sample of the 1990 census), N'=1500, n= frequency of the population category in the Census subsample the case belongs to, n'= the parallel frequency in the TARKI sample.

Study description: Japan

Study title: 1994 ISSP Family Module

Fieldwork dates: January 15 to January 23, 1994

Principal investigators: Tomohiro Tsuji

Sample type: We used a two-stage stratified random sample of Japanese 16 or older.

Properties of the sample: Representative of the Japanese Population 16 and older. First urban and rural areas are divided into a number of groups (strata) based on similarities in local features and industrial structures. From each of those groups, streets and village sections are again grouped together to form sampling units. 150 survey spots are selected at random. Then, from the Basic Resident Register for these spots, 12 sample individuals aged 16 or over are selected according to a

fixed random number.

Study description: New Zealand

Study title: ISSP 1994 Survey: The Roles of Men and Women in Society

Fieldwork dates: September to November 1994

Principal investigators:

P. Gendall, Massey University, Palmerston North, New Zealand

Sample type: The sample was selected using the 1993 New Zealand electoral rolls

which contain the names of all registered voters over the age of 18 years. New Zealand is divided into 99 electorates of approximately equal size. A systematic random sample was taken from each electorate. There were no age or sex quotas and, because the electoral rolls were used, the

sample reflects the distribution of the population.

Fieldwork institute: Department of Marketing, Massey University

Fieldwork methods: Mail survey: The questionnaire was administered in four waves. An

initial questionnaire was sent to the 1672 selected participants, along with a covering letter explaining the study. A first reminder was posted 22 days later, and a third reminder a further 21 days later. A final reminder package was posted to remaining non-respondents after a

further 20 days. The survey was in the field for a total of 97 days.

Comments on labour force status and education

The NSD data are compared with data from the Norwegian Labour Force Surveys (LFS). The LFS are conducted every month with a gross sample of about 10000 persons aged 16-74 years. The aim of the LFS is to watch the development in the labour market and to estimate the composition of the population with respect to labour force participation and main activity. In the LFS members of the labour force are defined as people

- 1. who have some sort of paid work or are drafted in military service (the questions tapping this aspect are identical in the LFS and the NSD surveys);
- 2. who work in family business;
- 3. who are temporarily out of work (e.g. sick, laid off).

From the NSD background variable questions we are able to construct a labour force status variable which is a good comparison with the LFS data. There might be a small uncertainty about people who are temporarily out of work and for some reason answer that they don't have paid work. Since the Central Bureau of Statistics uses a combination of telephone and personal interviewing in the LFS, we also believe that the Central Bureau achieves relative higher response rates among marginal social groups. The construction of comparable education variables is more uncertain, and the data should be interpreted with great care.

Study description: Philippines

Study title: Social Weather Station's National Survey

Fieldwork dates: December 2 to December 23, 1994

Principal investigators:

Social Weather Stations, Inc. (SWS)

Fieldwork institute: Social Weather Stations, Inc. (SWS)

Sample type: The SWS sample had 1200 voting-age (18 years and over) respondents.

It took quotas of 300 each of four major areas: National Capital Region, Balance of Luzon (within Luzon but outside the National Capital Region), Visayas and Mindanao. The National Capital Region is entirely urban. The other three regions had sample quotas of 150 urban and 150 rural respondents each. Multi-stage probability sampling was used in the selection of the sample. The last stage prior to the selection of the dwelling contained 150 urban electoral precincts and 90 rural barangays (villages). The regional and national figures are obtained by applying appropriate census-based population weights to the sample quotas and

the sub-quotas.

Fieldwork methods: The survey was based on face-to-face oral interviews, using a structured

questionnaire, that lasted from 45 minutes to one hour (considering both ISSP and non-ISSP components). The survey had two types of respondents: the head of household, who answered some questions pertaining to the household, and a randomly chosen adult respondent, possibly but not necessarily the head of household, who answered the rest (the bulk) of the questions. The ISSP questions were directed to the

adult respondent.

Sample size: 1200

Weighted: Yes

Weighting procedure: To come up with total Philippine figures, appropriate weights, based on

the National Statistics Office's (NSO) 1980 projections for the year

1985, were applied. The obtained weights are given below.

The allocation of sample units in each stage is as follows:

Urban:

	Provinces	Cities	Precincts	Households	Respondents
Metro Manila		14	60	300	300
Balance Luzon	10	30	30	150	150
Visayas	5	15	30	150	150
Mindanao	5	15	30	150	150
Total	20	54	150	750	750

Rural:

	Barangays	Households	Respondents
Balance Luzon	30	150	150
Visayas	30	150	150
Mindanao	30	150	150
Total	90	450	450

$Weight = population \, / \, sample \, \, size$

	Projected #	Total sample	Weights
	of adults	size	
	1985 (in		
	000)		
Metro Manila	4074	300	13.58
Balance Luzon	12333	300	41.11
Urban	3895	150	25.97
Rural	8438	150	56.25
Visayas	6690	300	22.30
Urban	1892	150	12.61
Rural	4798	150	31.99
Mindanao	6682	300	22.27
Urban	1704	150	11.36
Rural	4978	150	33.19

Study description: Poland

Study title: ISSP 1994: Family and Changing Gender Roles II

Fieldwork dates: May to June, 1994

Principal investigators:

Bogdan Cichomski, Institute for Social Studies, University of Warzawa Co-principal Investigator: Dr. Zbigniew Sawinski, Institute for Social

Studies, University or Warsaw

Fieldwork institute: Center of Field Research (ORBS) at the Institute of Philosophy and

Sociology, Polish Academy of Science

Sample type:

A sample was a three stage national random sample of private households. In the first stage the area of Poland was divided into 77 primary sampling units (strata). They consisted of (1) all cities having more than 100,000 inhabitants (in the case of five cities having larger number of inhabitants city districts were established as separate strata), (2) all cities having less than 100,000 inhabitants were grouped into four categories according to the number of inhabitants (less than 10 thousand, 10-19 thousand, 20-49 thousand, and 50-100 thousand) and, finally, (3) rural areas were divided into eight regions. In the second stage single cities or communities were selected separately from each primary unit consisting of cities under 100 thousand inhabitants or rural areas. The number of secondary sampling units was proportional to the size of the primary sampling unit they were selected from. All cities having more than 100 thousand inhabitants (or their district) automatically became secondary sampling units. Finally, 223 secondary sampling units were selected.

The third stage consisted in selecting households from each secondary sampling unit. In case of units representing cities having more than 100 thousand inhabitants, the number of households drawn was proportional to the size of the unit. From other units the approximately equal number of households (4 to 6) were selected.

Through the procedure described above 2000 addresses of households were selected. Coming to every household an interviewer gathered information about month and year of birth of all persons living in the household and then selected respondent from all persons 18 or more years old, using a special table of selection (unique for every household).

Fieldwork methods:

The background data were collected through personal interviewing, as a part of the 1994 PGSS survey. The ISSP module was conducted as a separate self-completion questionnaire following the PGSS 1994 face-to-face interview and then returned to the interviewer. Sexual Behavior Supplement was returned by mail to office.

343	E - Non-responses		
125	F - Refusals		
165	G - Non-contact and other		
53	H - Other		

Polish Language:

Weighted: Yes

Weighting procedure: The weighting factor used consists of two elements. First each case was weighted by the number of persons 18 or more years old, living in a household. Then, post-stratification weighting was applied. Using official data about gender, age (three categories) and type of place of living (seven categories of size for the cities and eight regions for rural areas), a 90-cell table was created. For every cell a sampling rate was estimated. Post-stratification weighting was based on those coefficients. Finally, the weighting factor was normalized to the number of interviews conducted in the sample.

Known systematic properties:

Representative for population aged 18 and over living in private households.

Study description: Russia

Study title: Family and Changing Sex Roles 1994

Fieldwork dates: August 1994

Principal investigators:

Dr. Ludmilla Khakhulina

Sample type:

Three stage regionalized stratified address sample of Russia's population in an age of 18 years and older.

At the first stage, the total planned amount of sample was distributed over 11 economic geographical regions of Russia proportionally to the shares of population in an age of 18 years and older, living in each region. The population of the Northern and North-Western regions were united in one region.

At the second stage, the questionnaires relating to each region were divided by 6 strata proportionally to the shares of population of an age 18 years and older living in them:

- 1) Moscow and St. Petersburg
- 2) Central cities of krais (territories) and oblasts (regions)
- 3) Capitals of autonomies
- 4) Periphereal cities in krais and oblasts (regions)
- 5) Periphereal cities in autonomies
- 6) Rural settlements

At the third stage, in urban sampling points were randomly selected 2 or three city districts (no more than 25 interviews in each district) and the number of interviews relating to a city was equally divided between the city districts. In each of the city districts (rural settlements) respondents' addresses for the survey were selected in the necessary number by a systematic method form lists of address offices (household registration books).

In case of a false address or respondent's absence, after an interviewer's two callbacks the interviewer was given a new address selected by the same method.

Fieldwork institute: VCIOM, Moscow

Fieldwork methods:

drop-off, self-completion questionnaire - In the fieldwork, employees and part-time interviewers of 12 VCIOM regional centres (RO) were engaged. The interviewing was conducted at respondent's home in the presence of the interviewer who was to prevent an influence of other household members on answers of the respondent. If a respondent was absent at the moment of an interviewer's call, callbacks to this address were envisaged, not exceeding three in number. The work of every interviewer was controlled by telephone or a callback in the proportion of 1 per 10 interviews.

Sample size: 1998

Language: Russian

Weighted: Yes

Weighting procedure: Reference on the distribution of respondents' totality and corrected sampling by controlled social groups. Weight coefficients are defined as extreme ones for the sum of squares of deviations of weighted estimates from corresponding precise values of proportions of the following social groups within the surveyed population

Gender groups:

	<u> </u>
1.	Male
2.	Female

Age groups:

3.	18 - 24 years		
4.	25 - 39 years		
5.	40 - 54 years		
6.	55 and over years		

Education groups:

7.	University or equivalent, complete or incomplete	
8.	Common school (9-10 classes) or special	
	engineerings	
9.	Incomplete common school	

Settlement groups:

10.	Oblast's centers	
11.	Other cities and towns	
12.	Rural settlements	

Sum of weight coefficients makes n= 1998.0

Study description: Spain

Study title: Family and Changing Sex Roles

Fieldwork dates: September 5 to 11, 1994

Principal investigators:

CIS (Centro de Investigaciones Sociológicas), Miguel Diez

Sample type: Representative sample of adults aged 18 years and over living in private

households in Spain. The Canary and Balearic Islands are included;

Ceuta and Melilla are excluded.

Affixation: proportional.

Sample geographical points: 159 municipalities and 45 provinces. Source: 1991 Census, Instituto Nacional de EstadPstica (I.N.E.).

Sampling Procedure: Interviews are distributed by regions (Autonomous Communities) and by size of place categories within regions, proportional to their population 18 years and over. Municipalities are then selected randomly within each size of place category. Electoral sections within each municipality are selected randomly too. Then, random routes are used to select households on the basis of Kish's Tables. (The data-file may be weighted by age and sex, at convenience, through the weight-variable). The strata have been made by crossing the 17 regions (Autonomies) with the size of place, divided into 7 categories: less than 2,000 inhabitants; between 2,001 and 10,000; between 10,001 and 50,000; between 50,001 and 100,000; between 100,001 and 400,000; between 400,001 and 1,000,000; more than 1,000,000 inhabitants.

Fieldwork methods: Individuals selected following random routes and quotas by sex and age.

Study description: Sweden

Study title: Attitudes towards Family and Gender Roles

Fieldwork dates: February to May 1994

Principal investigators:

Dr. Stefan Svallfors, Department of Sociology, Umeå University, Umeå,

Sweden

Sample type: Representative sample of the Swedish population 18-74 years.

Fieldwork institute: Statistics Sweden

Fieldwork methods: Separate postal survey with two reminders by post to all non-

respondents and a telephone interview follow-up on a sub-sample of

remaining non-respondents

Context of ISSP questionnaire:

Separate survey

Sample size: 1272

Response rates:

2000	A - Total issued
1988	C - Total eligible
1272	D - Total ISSP questionnaires
	received
1093	by mail
179	by telephone
716	E - Total non-response
182	F - Refusals
534	G - Non-contact

Language: Swedish

Weighted: Yes

Weighting procedure: A subsample was drawn among those who had still not responded after

two subsequent reminders. 50 % of them were selected for telephone interviewing, following the normal practices of Statistics Sweden. All respondents in the subsample has accordingly been given the weight 2.12 in the systemfile. However, in order to keep the representativeness of the

sample, all calculations should be made using the weight.

Study title: General Social Survey 1994 (Women, work and Family)

Fieldwork dates: February to April 1994

Principal investigators:

James A. Davis, Tom Smith, NORC

Sample type: Three-stage NORC Master Sampling: Full Probability Sample

Fieldwork institute: National Opinion Research Center, University of Chicago, NORC

Fieldwork methods: Self-administered supplement completed after the main GSS

questionnaire

Context of ISSP questionnaire:

The ISSP data are part of the GSS 1994. The GSS 1994 is two fielded as one. There are twice the normal sample size and two topical modules. A new biennal split-sample design is used. The sample consists of two parallel sub-samples of approxiamately 1500 cases each. The A sample also contains a standard, topical module, the mini-modules, and an ISSP module (on women, work and the family). In effect, one can think of the A sample as representing a traditional GSS for 1994.

Explanations

- <1> A variable (and reference) number have been assigned to each item in the study. In the present codebook which documents the archived data set, these numbers are identical. Should the data set be subsetted or rearranged the variable numbers might change to reflect the order of the new data set while the reference numbers would remain unchanged to provide a link to the archived data set.
- <2> Indicates the abbreviated (24 character maximum) variable label used
 within OSIRIS or SPSS system files.
- <3> "Location" indicates the starting position of the variable when the dataset is stored in the OSIRIS format."Width" describes the number of positions of the variable.
- <4> "MD" indicates the designation of the missing data. MD1 indicates an explicit defined single value. MD2 designates a single value or a value range, i.e. all values equal or greater than this value have been declared missing. Although these categories are defined as missing data categories, this does not mean that the user should not or cannot use these codes if so desired.
- <5> If a variable contains implied decimals, the message "Dec.places: xx" appears here, where xx is the number of decimal places.
- <6> Indicates the full question text taken from the British questionnaire. Wherever possible the original sequence of questions has been retained, although some changes were necessary to integrate the different national questionnaires.
- <7> Indicates commentaries and explanations added during the processing of the study. < within question or answer texts may indicate whether the questionnaire in a particular country is deviating from the general format.</p>
- <8> Indicates the code value for the single answer category.
- <9> Indicates the textual definition of the codes. Abbreviations commonly used are DK (don't know), NA (no answer), Can't choose, Not applicable and Not available.
- <10> Indicates percentaged frequencies by country. This form is used whenever code categories have the same meaning for all countries. Column percentages are based only on "valid cases". Missing data values were excluded from percentages.

V1 ZA Study Number 2620

Location: 1 Width: 4

Zentralarchiv Study Number '2620'

V2 Respondent ID Number

Location: 5 Width: 7

Respondent Number

This uniquely identifies each respondent. The first two digits are identical with the country code, the next five digits contain the original identification number.

V66 How many sex partners last year

MD1: 00 MD2: 97 Location: Width:

 $\rm Q.1$ There is a great deal of concern today about the AIDS epidemic and how to deal with it. Because of the grave nature of this problem, we are going to ask you some personal questions and we need your frank and honest responses. Your answers are confidential and will be used only for statistical reports. How many sex partners have you had in the last 12 months? (Please circle one answer)

01. 1 partner
02. 2 partners
03. 3 partners
04. 4 partners
05. 5 - 10 partners
06. 11 - 20 partners
07. 21 - 100 partners
08. More than 100 partners
95. Several partners, PL: more than 70 partners

97. Questions not asked, refused 99. NA 00. NAV, No partners

Education I: Years in school

AUS: What is the highest grade or year of (primary or

secondary) school you have completed?
How many years from school to university education but without vocational training?

Years in school: Recode from - How old were you when GB: you completed continuous full-time education?

USA: What is the highest grade in elementary school or high school that you finished and got credit for?

I: How many years in general have you studied? (Consider years at primary school to university grades)

How many years have you attended school all full-time

education included
How long did you go to school include also incomplete
or part-time studies?

Highest years of school completed

RUS: How many years alltogether did you study?

(Include vocational training)

SLO: How many years in regular formal schooling?

NZ: How many years of full-time education?

Actual number of years of full-time schooling

- 01. 1 year

- 09. 9 years 10. GB: 10 years or less 14. GB: 14 years or more
- 20. AUS: 20 years or more
- 43. 43 years
- 95. Still at school
 J: Still at high school
 96. Still at college, university
- 97. Other answer
- 98. Don't know
- 99. NA
- 00. No formal schooling, Not available

ASCO MAJOR, MINOR AND UNIT GROUP STRUCTURE

1 MANAGERS AND ADMINISTRATORS

- 11 Legislators and government appointed officials
 - 1101 Parliamentarians, councillors and government representatives
 - 1103 Judges, magistrates and mediators
- 12 General managers
 - 1201 General managers
- 13 Specialist managers
 - Finance managers
 - 1303 Sales and marketing managers
 - 1305 Production managers
 - 1307 Supply and distribution managers
 - 1309 Personnel and industrial relations managers
 - Data processing managers 1311
 - Public policy managers 1313
 - Directors of nursing 1315
 - 1317 Education managers
 - 1319 Commissioned officers
 - 1399 Other specialist managers
- 14 Farmers and farm managers
 - 1401 Farmers and farm managers
- 15 Managing supervisors (sales and service)
 - Shop managers
 - 1503 Restaurant and catering managing supervisors
 - Accommodation and tavern managing supervisors Financial institution branch managers 1505
 - 1507
 - 1599 Other managing supervisors (sales and service)
- 16 Managing supervisors (other business)
 - 1601 Managing supervisors (other business)

PROFESSIONALS

- 21 Natural scientists
 - 2101 Chemists
 - Geologists and geophysicists
 - 2105 Physicists
 - Life scientists 2107
 - 2109 Medical testing professionals
 - 2199 Other natural scientists
- 22 Building professionals and engineers
 - Architects and landscape architects 2201
 - 2203 Quantity surveyors
 - Cartographers and surveyors Chemical Engineers 2205
 - 2207
 - 2209 Civil engineering
 - 2211 Electrical and electronics engineers

Standard occupation classification unit groups within minor groups.

Source: In 1991 OPCS introduced a new occupation coding schema, the Standard Occupational Classification (SOC). "Occupations are viewed in SOC as coherent sets of work activities carried on by individuals. In defining occupations are the one bear to distinguish as far as tional groups, the aim has been to distinguish as far as possible in terms of the type and level of skills required to carry out the main work activities" (OPCS, 1991b, p.2).

Table A1 SOC - Derivation of social class and socio-economic groups

- General managers and administrators in national and local government, large companies and organisations
 - Generals administrators; national government (assistent secretary/grade 5 and above)
 - 101 General managers; large companies and organisations
 - 102 Local government officers (administrative and execute funtions)
 - 103 General administrators; national government (HEO to Senior Principal/Grade 6)
- Production managers in manufacturing, construction, mining and energy industries
 - Production, works and maintenance managers Managers in building and contracting Clerks of works 110

 - 112
 - 113 Managers in mining and energy industries
- 12 Specialist managers
 - 120 Treasurers and company financial managers
 - 121 Marketing and sales managers
 - 122 Purchasing managers
 - Advertising and public relations managers 123
 - Personnel, training an industrial relations managers Organisation an methods and work study managers 124
 - 125
 - Computer systems and data processing managers 126
 - 127 Company secretaries
- Financial institution and office managers civil service 13 executive officers
 - 130 Credit controllers
 - Bank, building society and post office managers 131 (except self-employement)
 - Civil service executive officers
 - 139 Other financial institution and office managers n.e.c.
- 14 Managers in transport and storing
 - 140 Transport managers
 - 141 Stores controllers
 - 142 Managers in warehousing and other materials handling
- 15 Protective service officers
 - 150 Officers in UK forces
 - Officers in foreign and commonwealth armed forces Police officers (inspector and above)
 - 152
 - Fire service officers (station officer and above) 153
 - Prison officers (principal officer and above) Customs and excise, immigration service officer (customs: chief preventive officer and above; excise: surveyor and above)
- 16 Managers in farming, horticulture, forestry and fishing
 - Farm owners and managers, horticulturists
 - Other managers in farming, horticulture, forestry and 169

fishing n.e.c.

17 Managers and proprietors in service industries

- 170 Property and estate managers
- 171
- Garage managers and proprietors Hairdressers' and barbers' managers and proprietors 172
- 173 Hotel and accommodation managers
- 174 Restaurant and catering managers
- 175 Puplicans, innkeepers and club stewards
- 176 Entertainment and sports managers
- 177 Travel agency managers
- 178 Managers and proprietors of butchers and fishmongers
- 179 Managers and proprietors in service industries n.e.c.

19 Managers and administrators n.e.c.

- Officials of trade associations, trade unions,
 - professional bodies and charities
- 191 Registrars and administrators of educational establishments
- Other managers and administrators n.e.c.

20 Natural scientists

- 200 Chemists
- Biological scientists and biochemists 201
- Physicists, geologists and meteorologists Other natural scientists n.e.c. 202
- 209

21 Engineers and technologists

- 210 Civil, structural, municipal, mining and quarrying
 - engineers
 - Mechanical engineers
- 212 Electrical engineers
- 213 Electronic engineers
- 214 Software engineers
- 215 Chemical engineers
- 216 Design and development engineers
- 217
- Process and production engineers
 Planning and quality control engineers 218
- 219 Other engineers and technologists n.e.c.

22 Health professional

- 220 Medical practitioners
- 221 Pharmacists/pharmacologists
- 222 Ophthalmic opticians
- Dental practitioners 223
- 224 Veterinarians

23 Teaching Professionals

- University and politechnic teaching professionals Higher and further education teaching professionals
- 231
- 232 Education officers, school inspectors

- Secondary (and middle school deemed secondary) education teaching professionals
 Primery (and middle school deemed primary) and nursery education teaching professionals
 Special education teaching professionals 234
- Other teaching professionals n.e.c.

24 Legal professionals

- 240 Judges and officers of the court
- 241 Barristers and advocates
- 242 Solicitors

25 Business and financial professionals

- Chartered and certified accountans
- 251 Management accountants
- 252 Actuaries, ecconomists and statisticians
- 253 Management consultants, business analysts

26 Architects, town planners and surveyors

Note 0002 (continued) Architects 260 Town planners Building, land, mining and 'general practice' 261 262 surveyors 27 Librarians and related professionals Librarians Archivists and curators 271 29 Professionals occupations n.e.c. 290 Psychologists 291 Other social and behavioral scientists 292 Clergy 293 Social workers, probation officers 30 Scientific technicians 300 Laboratory technicians Engineering technicians 301 Electrical/electronic technicians 302 Architectural and town planning technicians Building and civil engineering technicians 303 304 309 Other scientific technicians 31 Draughtspersons, quantity and other surveyors 310 Draughtpersons Building inspectors Quantity surveyors 311 312 Marine, insurance and other surveyors 313 32 Computer analyst/programmers 320 Computer analyst/programmers Ship and aircraft officers, air traffic planners and controllers Air traffic planners and controllers Aircraft flight deck officers 331 332 Ship and hovercraft officers 34 Health associate professionals 340 Nurses 341 Midwives 342 Medical radiographers 343 Physiotherapists 344 Chiropodists 345 Dispensing opticians Medical technicians, dental auxiliaries Occupational and speech therapists, 346 347 psychotherapists, therapists n.e.c. Environmental health officers 348 349 Other health associate professionals n.e.c 35 Legal associate professionals 350 Legal service and related occupations 36 Business and financial associate professionals 360 Estimators, valuers 361 Underwriters, claims assessors, brokers, investment analysts 362 Taxation experts 363 Personnel and industrial relations officers Organisation and methods and work study officers 364 37 Social welfare associate professionals 370 Matrons, houseparents Welfare, community and youth workers

38 Literary, artistic and sport professionals

380 Authors, writers, journalists

- Artists, commercial artists, graphic designers
- 382 Industrial designers
- 383 Clothing designers
- 384 Actors, entertainers, stage managers, producers and directors
- 385 Musicians
- 386 Photographers, camera, sound and video equipment operators
- 387 Professional athletes, sports officials
- 39 Associate professionals and technical occupations n.e.c.
 - 390 Information officers
 - Vocational and industrial trainers 391
 - 392 Careers advisers and vocational guidance specialists
 - 393 Driving instructors (excluding HGV)
 - 394 Inspectors of factories, utilities and trading standards
 - 395 Other statutory and similar inspectors n.e.c.
 - 396 Occupational hygienists and safety officers (health and safety)
 - 399 Other associate professional and technical occupations n.e.c.
- Administrative/clerical officers and assistants in civil service and local government
 - Civil service administrative officers and assistants
 - Local government clerical officers and assistants 401
- 41 Numerical clerks and cashiers
 - 410 Accounts and wages clerks, book-keepers, other financial clerks
 - Counter clerks and cashiers Debt, rent and other cash collectors 412
- 42 Filing and records clerks
 - 420 Filing, computer and other records clerks (inc. legal conveyancing)
 - 421 Library assistants/clerks
- 43 Clerks (not otherwise specified)
 - 430 Clerks (n.o.s.)
- Stores and despatch clerks, storekeepers
 - Stores, despatch and production control clerks
 - Storekeepers and warehousemen/women 441
- Secretaries, personal assistants, typists, word processor operators
 - 450 Medical secretaries
 - 451 Legal secretaries
 - 452 Typists and word processor operators
 - Other secretaries, personal assistants, typists, word processor operators
- 46 Receptionists, telephonists and related occupations
 - 460 Receptionists
 - 461 Receptionists/telephonists
 - 462 Telephone operators
 - Radio and telegraph operators, other office 463 communication system operators
- 49 Clerical and secretarial occupations n.e.c.
 - Computer operators, data processing operators, other office machine operators
 - 491 Tracers, drawing office assistants
- 50 Construction trades
 - Bricklayers, masons
 - Roofers, slaters, tilers, sheeters, cladders 501

Note 0002 (continued) 502 Plasterers 503 Glaziers 504 Builders, building contractors 505 Scaffolders, stagers, steeplejacks, riggers Floorers, floor coverers, carpet fitters and planners, 506 floor and wall tilers 507 Painters and decorators 509 Other construction trades n.e.c. 51 Metal machining , fitting and instrument making trades Centre, capstan, turret and other lathe setters and setter-operators $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left($ 510 Boring and drilling machine setters and setter-operator Grinding machine setters and setter-operators Milling machine setters and setter-operators Press setters and setter-operators

- 869 Other routine process operatives n.e.c.

87 Road transport operatives

- Bus inspectors
- Road transport depot inspectors and related occupations Drivers of road goods vehicles 871
- 872
- 873 Bus and coach drivers
- Taxi, cab drivers and chauffeurs
- 875 Bus conductors

88 Other transport and machinery operatives

- Seafarers (merchant navy); barge, lighter and boat operatives
- 881 Rail transport inspectors, supervisors and guards
- 882 Rail engine drivers and assistants
- 883 Rail signal operatives and crossing keepers
- 884
- Shunters and points operatives Mechanicals plant drivers and operatives (earth 885 moving and civil engineering)
- 886 Crane drivers
- 887 Fork lift and mechanical truck drivers
- 889 Other transport and machinery operatives n.e.c.

89 Plant and machine operatives n.e.c.

- Washers, screeners and crushers in mines and quarries
- Printing machine minders and assistants Water and sewerage plant attendants 891
- 892
- 893 Electrical, energy, boiler and related plant operatives and attendants
- Oilers, greasers, lubricators Mains and service pipe layers, pipe jointers 895
- 896 Construction and related operatives
- 897 Woodworking machine operatives
- 898
- Mine (excluding coal) and quarry workers Other plant and machine operatives n.e.c. 899

90 Other occupations in agriculture, forestry and fishing

- Farm workers
- 901 Agricultural machinery drivers and operatives
- 902 All other occupations in farming and related
- 903 Fishing and related workers
- 904 Forestry workers

91 Other occupations in mining and manufacturing

- 910 Coal mine labourers
- 911 Labourers in foundries
- 912 Labourers in engineering and allied trades
- 913 Mates to metal/electrical and related fitters

Other labourers in making and processing industries

92 Other occupation in construction

- Mates to woodworking trades workers
- Mates to building trades workers Rail construction and maintenance workers 922
- 923 924 Road construction and maintenance workers
- Paviors, kerb layers
- 929 Other building and civil engineering labourers n.e.c.

93 Other occupations in transport

- 930 Stevedores, dockers
- 931 Goods porters
- 932 Slingers
- Refuse and salvage collectors Driver's mates 933
- 934

94 Other occupations in communication

- Postal workers, mail sorters
- 941 Messangers, couriers

95 Other occupations in sales and services

- Hospital porters 950
- 951 Hotel porters
- 952 Kitchen porters, hands
- 953 Counterhands, catering assistants
- 954 Shelf fillers
- 955 Lift and car park attendants
- 956 Window cleaners
- Road sweepers 957
- 958 Cleaners, domestics
- 959 Other occupations in sales and services n.e.c.

99 Other occupations n.e.c.

Note 0004

This Note refers to V248, V270 and contains specific explanations about size and type of the place of residence.

United States

NORC size of place

Source: GSS Methodological Report No.4.

Within an SMSA and --

- 03 04
- A large central city (over 250.000)
 A medium size central city (50.000 to 250.000)
 A suburb of a large central city
 A suburb of a medium size central city
 An unincorporated area of a large central city
 (division, township, etc.) 05
- 06 An unincorporated area of a medium central city

Not within an SMSA, (within a country) and --

- A small city (10.000 to 49.999) A town or village (2.500 to 9.999) (b)
- 08
- An incorporated area less than 2.500 or an unincorporated area of 1.000 to 2.499 09 (c)
- Open country within larger civil divisions, e.g. 10 township, division

Remarks:

- A suburb is defined as any incorporated area or unincorporated aarea of 1.000+ (or listed as such in the U.S. Census PC (1)-A books) within the boundaries of an SMSA but not within the limits of (a) a central city of the SMSA. Some SMSAs have more than one central city, e.g., Minneapolis-St. Paul. In these cases, both cities are coded as central cities.
- (b) If such an instance were to arise, a city of 50.000 or over which is not part of an SMSA would be coded '07'.
- Unincorporated areas of over 2.499 are treated as incorporated areas of the same size. Unincorporated areas under 1.000 are not listed by the Census and are treated here as part of the next larger civil division, usually the township.

Hungary

- Central city (or suburb of a city) Budapest and the 5 major towns of the country (Miskolc, Szeged, Debrecen, Pecs and Gyor) Smaller city (or suburb of a smaller city) 1
- All other minor towns
- 3 Rural Large and small villages

Note 0005

This Note refers to V219 and contains specific american protestant denominations (Code 49).
